

## Optimise your gas cylinder stock. Gain control and save money.

### What is ACCURA® gas management for cylinders?

Managing gas cylinders is easy, effective and secure when you use ACCURA® gas management for cylinders. We offer a straightforward web-based service that enables you to track and utilise information about the status of your gas cylinders throughout your entire facility.

Since several years, AGA equips each cylinder with an identification tag which is read in our daily operations. This makes it possible to track the cylinder, if required also within your site. Via this tag and the information registered in the ACCURA® service, you can readily access and maintain detailed records on each and every cylinder. And not only this; by using ACCURA® gas management actively, you will ensure that you have the right amount of cylinders needed for your business. ACCURA® gas management for cylinders means improved cylinder utilisation and costing as well as higher levels of quality and safety.

### Is ACCURA® gas management for cylinders the right solution for me?

The identification tag, or chip, on the cylinder is like a fingerprint, that clearly identifies the cylinder throughout its life cycle. The chip is read when the cylinder is filled, when it's delivered, and of course when it's returned from you and entering our production site again. Over and over again. The individual cylinder control is part of AGA's core business, which makes ACCURA® gas management for cylinders available for all customers, large and small. Today, the ACCURA® service is used by many different industries to solve a diverse set of customer requirements. When determining if ACCURA® gas management is the right choice for you, it is helpful to ask yourself the following questions:

- Is reducing the total cost of storing, handling, and using cylinder gases a goal of your company?
- Are you unsure of how many cylinders you should order and have on hand?
- Would you benefit from reducing costs by finding the optimal balance between lease agreements and daily rents?
- Are you looking for ways to increase the level of safety at your facility?
- Have you had problems with "lost" or "misplaced" cylinders in the past?
- Do you use toxic or other potentially hazardous gases?
- Do you deal with gases that have a defined shelf life?
- Do you need to reallocate costs for gas cylinders to different departments?

If the answer to any of the above questions is "yes", then ACCURA® gas management for cylinders may be just the solution you need. With detailed information on every cylinder stored electronically, the ACCURA® service reduces the complexity of managing your cylinder stock.

You'll get more than cylinder tracking. A range of automatically generated reports include, for example updated information on stock levels, average cylinder saldos, cylinder rotation, expiration dates, gas consumption and costs.

**What are the benefits?**

**Increased productivity**

- Monitor and improve cylinder utilisation
- Reduce the time needed for internal administration

**Improved safety**

- Reduce number of cylinders on site
- Locate hazardous cylinders immediately in an emergency situation

**Reduced expenses**

- Reduce the number of "lost" gas cylinders and the related charges
- Determine the best balance between lease agreements and daily rent
- Increased cost control through transparency and reallocation of costs

**Quality and traceability**

- Run detailed reports and display on screen or download as a spreadsheet
- Trace individual cylinders used at various stages of production

**How does it work?**

Within AGA, detailed information on each cylinder is recorded and tracked throughout the supply chain. Working with this information is part of our daily business. Through ACCURA® gas management for cylinders, you too get access to this valuable information over the Internet. Depending on your requirements, we can offer a suitable solution to you - from tracking a few cylinders, to managing more complex situations with several internal locations where you perform internal transfers to keep track of where your cylinders are, and who is responsible for their costs. Each time AGA exchanges cylinders, or internal transfers are uploaded, the ACCURA® website is automatically updated, ensuring that you always have access to the latest, most accurate cylinder information.

**What is needed to start the service?**

If you have a computer and Internet access all you need to do is contact your local sales representative. AGA professionals will work with you to customise the system to your facilities and unique requirements. Training sessions and customer support contact information are provided to make sure that you get the most value out of the service.
